

Paper Dolls

For this project you will need:

- paper
 - markers, crayons, or colored pencils
 - magazines
 - scissors
 - glue
 - brads
 - hole punch or pencil or pen
-
1. Using markers, crayons, colored pencils, or a combination of all three, draw a person, animal, or imaginary creature for your paper doll – get as wild and creative with your ideas as you want!
 2. You can also cut out images from magazines to create all of your paper doll or part of your paper doll. Glue the magazine images onto a piece of paper for backing.
 3. As you are creating your paper doll, think about what parts of the doll you want to move, like the legs and arms. Draw these parts separate or glue the magazine pieces on separate from the main paper doll body.
 4. Use scissors to cut out your paper doll and its moveable parts.
 5. Using a hole punch or the point of a pencil or pen, make holes in both the main paper doll body and the moveable limb piece where you want the two to attach.
 6. Poke the brad spikes through both holes, attaching the moveable limb to the main paper doll body by pulling the spikes apart on the back of the paper doll.
 7. Now it's time to play!
 8. No brads, no problem! Making paper dolls even if they don't have moveable limbs is still fun.
