

Photo Shooting & Editing

For this project you will need:

- camera
 - editing software
1. Grab your camera (it could be a cell phone camera). Make sure it is charged!
 2. Go outside so you can use the sun as your light source.
 3. Find a subject you want to take a picture of – flower, toy, person, bench, etc.
 4. Take a picture! Take photos of the same subject from different angles to see which shot you like best.
 5. Edit your picture! If you are using your cell phone camera, you can select edit and make changes to your photo on your phone.
 6. If you are on a computer, try the free editing software at <https://www.gimp.org/>.
 7. Experiment with all the editing features you can – either on your phone or using the editing software on your computer.
 8. When you're happy with your photo, save it.
 9. Then share it! Send it to family, friends, or online and tag @ahhatulsa.

This creative project is brought to you by teaching artist Daniel Jackson.
